SUMMARY

Software Development Engineer with ~3 years of experience building and scaling backend systems for high-throughput, production-grade platforms. Strong expertise in Python-based microservices, real-time scheduling, and distributed systems, with growing focus on AI-driven automation, including LLM-based agents and AI-powered developer tooling. Experienced in owning features end-to-end — from design and implementation to production rollout — in fast-paced, agile environments.

WORK EXPERIENCE

Software Development Engineer 2, Tata 1mg, Gurgaon

07/2023 – Present

- Architected a real-time job scheduling system using APScheduler, replacing static CRON jobs and enabling API-driven scheduling; **automated 90% of delivery partner order assignments**.
- Decoupled authentication from a monolithic WMS into an independent user microservice, unifying auth across five internal services and **reducing deployment time by 15%**.
- Built and scaled Django REST APIs for a phlebotomist sample collection platform, **handling 10,000 diagnostic orders per day**; implemented React and Tailwind dashboards for real-time order tracking.
- Designed a phlebotomist assignment algorithm, **reducing slot breaches by 7%**, and transitioned logistics from third-party to in-house, **cutting costs by Rs. 10 per order**.
- Refactored warehouse APIs to integrate directly with retail stores, enabling **1-hour medicine deliveries** and supporting **rapid expansion across 50 retail stores** in Gurgaon through modular reuse.
- Automated SKU-level margin deviation tracking in procurement, **recovering Rs. 5 lakhs per month** in lost margins by detecting discrepancies between agreed-upon and actual pricing.
- **Mentored three engineers** (two backend, one frontend) through internal boot camps and project lifecycles, resulting in **three successful production submissions**.
- Built a Bitbucket CI/CD pipeline with Pytest and enforced **90% code coverage, reducing manual QA effort by 35%**.
- Integrated AI coding agents into development workflows for boilerplate generation, refactoring, and reviews, **accelerating feature delivery by 30%** and **reducing L1/L2 review time by 50%**.
- Built an AI-powered vulnerability scanner for on-demand, repo-level static analysis across the org's 200+ microservices, classifying issues as High/Medium/Low; **mandated org-wide, cutting manual security review effort** and driving services toward zero open vulnerabilities.

PROJECTS

- **Restaurant AI Concierge Agent** — Developed a LangGraph-based AI chatbot agent for restaurant FAQs on menus, timings, and reservations, grounded in live menu and seat-availability data for accurate responses.
- **Java Compiler** — Constructed a multi-phase compiler for a Java subset with lexical analyser, symbol table manager, semantic analyser, and intermediate code generator; executed 1000+ lines of code successfully.
- **Google BBR Analysis** — Conducted a performance analysis of data packet queue under-utilization in Google's BBR congestion control algorithm and verified results using the NS-3 simulation framework.

SKILLS

- **Languages:** Python, Ruby, JavaScript, TypeScript, Java
- **Frameworks:** FastAPI, Django, Sanic, React.js, Tailwind CSS, APScheduler, Celery, Pytest, LangGraph
- **Databases:** PostgreSQL, MongoDB, Elasticsearch, Redis
- **Message Queues:** Kafka, SQS, Redis Pub/Sub
- **Cloud & Infrastructure:** AWS (S3, RDS, EC2, Lambda, CLI), Docker, Kubernetes, Linux
- **Architecture:** REST APIs, Microservices, Event-Driven Architecture, gRPC, System Design (HLD/LLD), OOP
- **Developer Tools:** Git, Jira, CI/CD Pipeline Development, Agile/Scrum, Unit Testing, Test-Driven Development
- **AI/LLM Tools:** LangGraph, LLM Agents, RAG, Claude Code, Codex

EDUCATION

- **Master of Technology (MTech) — Computer Science** 07/2023
Indian Institute of Technology Mandi, Mandi
- **Bachelor of Technology (BTech) — Computer Science** 07/2020
University of Petroleum and Energy Studies, Dehradun
